## **DETAILED ACTION**

### ***Response to Arguments***

Applicant's arguments, see page 18, filed 4/5/10, with respect to claims 45-56 have been fully considered and are persuasive. The 35 U.S.C. 103(a) rejection of claims 45-54 has been withdrawn.

In view of a recent update in guidelines, a new 35 U.S.C. 101 rejection has been added for claims 51 and 54.

### ***Claim Rejections - 35 USC § 101***

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

The USPTO "Interim Guidelines for Examination of Patent Applications for Patent Subject Matter Eligibility" (Official Gazette notice of 22 November 2005), Annex IV, reads as follows:

Descriptive material can be characterized as either "functional descriptive material" or "nonfunctional descriptive material." In this context, "functional descriptive material" consists of data structures and computer programs which impart functionality when employed as a computer component. (The definition of "data structure" is "a physical or logical relationship among data elements, designed to support specific data manipulation functions." The New IEEE Standard Dictionary of Electrical and Electronics Terms 308 (5<sup>th</sup> ed. 1993).) "Non functional descriptive material" includes but is not limited to music, literary works and a compilation or mere arrangement of data.

When functional descriptive material is recorded on some computer-readable medium it becomes structurally and functionally interrelated to the medium and will be statutory in most cases since use of technology permits the function of the descriptive material to be realized. Compare *In re Lowry*, 32 F.3d 1579, 1583-84, 32USPQ2d1031, 1035 (Fed Cir. 1994) (claim to data structure stored on a computer readable medium that increases computer efficiency held statutory) and *Warmerdam*, 33 F.3d at 1360-61, 31 USPQ2d at 1759 (claim to computer having a specific data structure stored in memory held statutory product-by-process claim) with *Warmerdam*, 33 F.3d at 1361, 31 USPQ2d at 17660 (claim to a data structure per se held nonstatutory).

In contrast, a claimed computer-readable medium encoded with a computer program is a computer element which defines structural and functional interrelationships between the

Art Unit: 2625

computer program and the rest of the computer which permit the computer program's functionality to be realized, and is thus statutory See Lowry, 32 F.3d at 1583-84, 32 USPQ2d at 1035.

Claims 51 and 54 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter as follows. Claims 51 and 54 define a computer program embodying functional descriptive material. However, the claim does not define a ***non-transitory*** computer-readable medium or memory and is thus non-statutory for that reason (i.e. "When functional descriptive material is recorded on some computer-readable medium it becomes structurally and functionally interrelated to the medium and will be statutory in most cases since use of technology permits the function of the descriptive material to be realized" -Guidelines Annex IV). That is the scope of the presently claimed computer program can range from paper on which the program is written, to a program simply contemplated and memorized by a person. The examiner suggests amending the claim to first claim a "non-transitory computer readable medium" to store the program on, or equivalent, in order to make the claim statutory. Any amendment to the claim should commensurate with its corresponding disclosure.

### ***Allowable Subject Matter***

Claims 45-50, 52, 53, 55 and 56 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

Art Unit: 2625

Regarding claims 45, 48, 52 and 53, the prior art does not contain a valid combination of references that teaches a directory server separate from a host device that sends two separate encrypted access tickets, the first ticket for sending an encrypted print job and the second ticket for sending an encrypted management command; in order for the management command to be valid the decryption result of the second access ticket is compared directly to the decryption result of the first access ticket and based on this result determines the access right of a user sending the second access ticket to delete a job from a storage medium on a printer.

Claims 46, 47, 49, 50, 55 and 56 are allowed because they depend upon allowed claims.

Claims 51 and 54 would be allowable if the 35 U.S.C. 101 rejection was overcome for the same reason as detailed above for claims 45, 48, 52 and 53.
